

Library

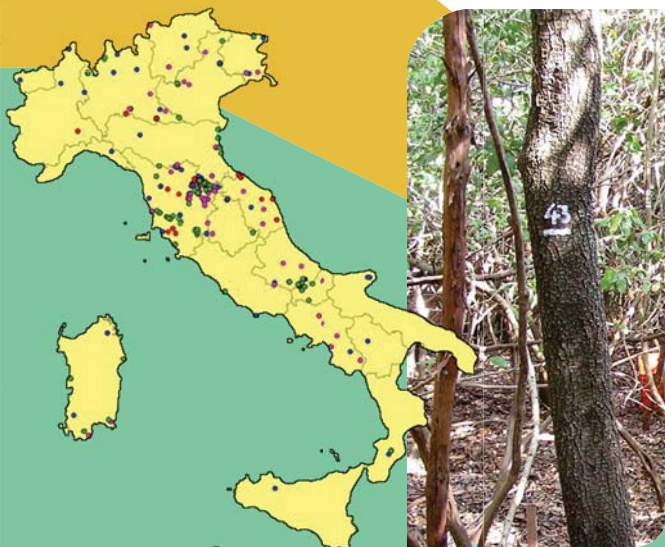

It owns 7,000 volumes and over 650 serials, covering an historical important timeframe of the Italian forestry sector and stores rare texts and collections; The Forestry Research Centre publishes the open access international journal **Annals of Silvicultural Research**.

Experimental trials

Experimental trials are established all over the Country and their number increases with the number of research projects joined by the Research Centre. Today 650 experimental areas have been established, covering an area of 1600 ha as a whole.

Experimental trials are functional to forest research due to the long forest life cycles and the need to assess the dynamics and incidence of disturbances on an adequate observation time scale.

ABOUT THE CENTRE

The Center deals with the manifold sides of sustainable forest management and forest tree farming, with main specializations in silviculture, management and improvement of forest genetic resources, conservation and enhancement of forest biodiversity, multifunctionality, resilience and adaptation to global environmental changes as well as agroforestry and valorization of wood and non-wood goods' production.

FORESTS AND WOODLANDS

Forest and woodlands are environmental elements to be protected and renewable resources to be cultivated according to shared goals fulfilling the societal demands.

WHAT FORESTRY RESEARCH STANDS FOR

It is basic and applied research for the protection, conservation, improvement and enhancement of the multiple functions of forest and wooded lands, of wood and non-wood goods' production and related environmental services.
